

Backup for VMs

RELIABLE BACKUP FOR VMWARE AND HYPER-V

Looking for the most simple, easy-to-use, and reliable backup service for your VMware vSphere and Microsoft Hyper-V environments?

HubStor's Backup-as-a-Service (BaaS) for vSphere and Hyper-V delivers the modern data protection solution that is simple, reliable, and costs less than legacy backup products.

Fast recovery to wherever you need

You need the flexibility to recover VMs to any on-premises location and cloud infrastructure to be ready for any type of disaster.

HubStor makes this flexible recovery possible. Restore VM backups to any instance on-premises or in the cloud.

Flexible storage

Preserve your backup data in HubStor with monthly storage costs as low as \$0.03 per GB (after compression).

Simple admin

Manage backup policies at any level in your virtualization topology. Monitor the status of backup and restore jobs globally, per data center, per hypervisor, and for each individual VM.

Full encryption

Enjoy AES 256-bit encryption both in flight and in transit, ensuring your back-ups are private.

Seamless replicas

Know that your backups replicate seamlessly in HubStor, giving you an instant offsite copy with a segregated geo-replica hundreds of miles away.

SIMPLE AND RELIABLE BACKUP WITHOUT THE INFRASTRUCTURE

Unlike traditional backup offerings that require you to configure and manage secondary and offsite backup storage yourself, HubStor's cloud-first approach keeps a small local cache for fast access to your most recent backup set while seamless offsite replication and long-term retention run in the cloud automatically.

15-mins to deploy

The HubStor Backup Service is agentless, enabling IT administrators to begin reliable protection of their VMs without a time-consuming onboarding and orientation investment.

Instant 3-2-1 protection

HubStor's VM backup service delivers enterprise-grade backup policy administration, monitoring, and a streamlined approach to achieving the gold standard of 3-2-1 data protection automatically.

Immutable from ransomware

Ransomware can attack backups. HubStor provides immutable storage for all backups seamlessly, ensuring that any unwanted encryption of local backups will not be a business-impacting event.

HubStor has provided Oxford Health with the confidence to grow into the cloud safely, knowing all our Office 365 data is backed up and protected within our own Azure tenancy, benefiting from Microsoft's storage flexibility. The HubStor technology is a stable, feature-rich and easy-to-use cloud backup solution. Oxford Health is now looking at utilising HubStor with its on-premise backups and replacing all current tape backup systems.
